Dear Hiring Team,

I am writing to express my strong interest in joining your team as a Developer. As a Unity Developer and UI/UX Designer with a background in the Boise State GIMM program, I specialize in bridging the gap between clean, optimized code and intuitive, player-facing design. I am eager to bring my experience in C#, Unity 6, and interactive systems to help your team ship polished, high-quality experiences.

My technical foundation is built on shipping functional prototypes and solving complex engine constraints. Most recently, I developed *Ghost Defiant*, a Mixed Reality shooter built in Unity 6 using the Meta Quest 3 ecosystem. For this project, I engineered custom debris physics, optimized fog particle systems for mobile hardware, and integrated the Meta All-in-One SDK to create a seamless passthrough experience. This work required not just gameplay programming, but a deep focus on performance profiling to maintain stable frame rates on standalone hardware.

Beyond core game logic, I offer strong capabilities in UI/UX and Front-End Development. I served as the Lead UI/UX Designer for a university-hosted Finance Simulator, where I designed and implemented a responsive, accessible interface that simplified complex data for student users. My ability to build tools that are both functional and visually clear allows me to collaborate effectively with both engineering and art teams, ensuring that gameplay mechanics are communicated clearly to the player.

I am proficient in C#, C++, and modern web technologies, but my true strength lies in my adaptability, whether I am scripting reactive enemy AI, designing a diegetic VR HUD, or optimizing a web layout. I am ready to contribute immediately to your production pipeline and grow alongside your engineering team.

Thank you for your time and consideration. I would welcome the chance to discuss how my specific skills in Unity development and interactive design can support your upcoming projects.

Sincerely,

James Russo
